

**Remarks/Arguments**

Applicants' claims are 1-8. Claim 1 has been amended to remove the qualified language, "capable of" and "able to" with respect to the metal complex and activator components. The identity of the metal complex has been supplied and the functional limitation of an olefin polymerization catalyst has been inserted into the preamble.

The foregoing amendments to claim 1 are believed sufficient to restore patentability under 35 USC §112, second paragraph. In as much as no additional rejections of applicants' claims are believed to exist, allowance of all of applicants' remaining claims is believed to be in order. Reexamination of all applicants' remaining claims accordingly is requested.

Respectfully submitted,

A handwritten signature in black ink, appearing to read "Douglas N. Deline", written over a horizontal line.
